Control your light settings and set
schedules direct from your smart device

Available in 2 light with single zone
and 4 light with multiple zones*

Integrates with the Halo Connect system

**2 LIGHT
CONTROLLER**

**4 LIGHT
CONTROLLER**

HALO LITE

Works seamlessly with AstralPool SLX and FLX lights, team them up together for the perfect match. Incorporating the latest in LED Light technology and encompasses features such as selectable colours, transitions and a long life lamp.

TOTAL LIGHTING CONTROLLER

When it comes to lighting your pool, your lights are only half of the equation, you also need to consider how to control features and conveniences for your requirements. Many light controllers require additional transformers to operate, as well as small easy to lose remote control devices.

Halo Lite is different to all others, with transformers built right in to the controller helping cut down on costs and space. Plus the control system is direct via Bluetooth, meaning you control it all from your smart device, ensuring you won't lose the ability to effectively control your pool lighting system.

With functionality built into the free app, you can select the colour or sequence desired at any time, plus you can set schedules for your lights to activate at any time.

DIY RETROFIT AND UPGRADE

An awesome feature of the Halo Lite is that you can easily retrofit it to most brands of single colour pool light, (See power specifications below) or if you have multi colour lights you can connect it to any Astralpool, Zodiac or Spa Electrics pool light, and control your lights directly via Bluetooth. Just plug in your Halo Lite, connect your existing low voltage pool lights (See power specifications below) and you are good to go, no electricians required.

UNLIMITED CHOICE

Halo Lite is available in 2 variants, Halo Lite², comes as a two light control transformer capable of controlling two x multi colour lights across a single zone. Or Halo Lite⁴ is a four light control transformer capable of four x multi colour lights. *If used with Halo Lite App as a standalone controller only 1 zone is available, If used with Connect 10 you can select all 4 lights to be Zone 1 or Zone 2. In fact you can connect up to 5 Halo Lite⁴ together via RJ12 cable to control up to 20 lights (in 1 Zone) either through the App or through an external low voltage switch (Note: If using a Halo Chlorinator, up to 4 x zones are available).

You can connect, via your Halo Lite app, multiple Halo Lite controllers and automate your entire backyard, pool lights, garden lights, water feature lights etc. (See power specifications below). There is virtually no limit to the number amount of Halo Lites you can connect and control from the app
